

Sidelight Fitting Supplement

- Take extra care when manourvering sidelight doorsets – always a miniumum of two people
- Use the webbing strap 'handles' to help move. Glide along floor where possible keeping lifting to a minimum.
- Installation is same as single doorset in that the recommended method of fixing is through each leg into the structural opening as shown on our Installation Guide:

- To do this it will be necessary to remove the glass or sidelight panel by taking out the beading. For help on how to deglaze and reglaze PVC frames see below link:

<https://www.youtube.com/watch?v=SAih2vzEjYY>

- If the gap between the head of the frame and structural opening is larger than 5mm then fill the gap with expanding foam ensuring frame is square. Allow foam to cure before plastering internally and applying mastic externally.
